Subject: RE: testimonies...

Kids in Technology opened up so many avenues to my son, in terms of how science, technology, engineering and math impact everyday life. Before Michael attended the KNT Stem Summer Camp at Rhodes College, he was convinced that these subjects were not that important or interesting to him. However, by the end of the first day, when the kids built a robotic hand, he was hooked. Throughout the entire three 3 week session, he remained engaged and truly excited to go to camp every day. So much so, that he was looking forward to participating again this summer. As a result, he was able to apply the knowledge he gained and apply them to his current school year. I know that he will forever be influenced by his experiences with Kid in Technology, and use those experiences to make curriculum decisions as he matriculates through school.
